Programming Languages

Strong

JVM Languages (Java, Kotlin, Groovy)

Proficient

Python, JavaScript (TypeScript, Node.js, React.js, D3, C3), PHP, GraphQL, HTML, CSS, SQL, NoSQL

Exposed To

C++, Prolog, Scheme, Racket, R

Technologies

Strong

Micro-services Architecture, Spring Boot, Spock

Proficient

AI Tooling, Agentic AI, MongoDB, PostgreSQL, Kubernetes, Snowflake, Kafka, RabbitMQ, Docker, Drone, ELK Stack, Networking, AWS/Azure

Exposed To

HAProxy, Nginx, Memcached, Redis, Hadoop Ecosystem, Android/iOS Development (Cordova)

Other Skills

- **Strong business and leadership skills**
- **Experienced in conducting usability studies & Design Thinking**
- **Agile Methodology**
- **Test-driven Development (TDD)**
- **Extensive international travel background (~80 countries), comfortable with working with and in different cultures (Bilingual: Thai/English)**

Engineering leader with 10+ years building systems at scale, from Target.com's real-time pricing engine handling 10M+ daily hits, to billing infrastructure processing billions of dollars at Datasite, to shipping Apple MDM from zero to production at Automox. Driven by a genuine love of learning and a belief that great software starts with great teams. A servant leader known for guiding products end-to-end, making sound architectural decisions, and creating a culture where engineers do their best work.

Experience

World Traveler
Spring 2024 – Spring 2026

• International career break for personal growth and global exploration. Visited 50+ countries during this sabbatical, bringing lifetime total to ~80 countries across 6 continents.

Staff Software Engineer – Automox
Fall 2021 – Spring 2024

• Led a team to create an MDM solution enabling IT admins to remotely manage Apple Devices end-to-end

→ Drove the initiative from initial concept through production, collaborating with Executives, Product, Legal, Marketing, and Design.
→ Recruited and formed a dedicated team; planned and executed the entire development lifecycle.
→ Maintained and stabilized a massive legacy system during significant organizational reduction in force, preserving critical institutional knowledge and ensuring business continuity after a 50% workforce reduction.

Senior Software Engineer – Datasite
Summer 2018 – Fall 2021

• Developed and maintained a highly sensitive billing system that directly impacts the company's bottom-line and thousands of clients.

→ Processed billions of dollars, with accuracy down to every penny

• Created an internal library that allowed data capturing of every activity on the application, used by many teams

→ Petabytes of data warehouse used for analytics as well as generating SOX-report (FEC)

• Created a secure email-service for which the firm uses for all outgoing emails

• Led a team to develop and deliver the new landing page of Datasite that completely revolutionized the look & feel of the application and streamlined its usage by providing insightful analytics and real-time notifications.

• Lead contributor for Datasite's latest product, Outreach.

→ Created various GraphQL, Node, and SpringBoot APIs → Implemented data integration system with Salesforce
→ Orchestrated an infrastructure for production-readiness of the application
(Set up monitors/alerts, trained app-support teams, ensured system scales efficiently, etc.)

• Contributed in various major architectural decision for the organization as well as helped mentor developers.

Software Engineer – TARGET
Summer 2016 – Summer 2018

• Implemented a functionality in the Target.com's data aggregator to deliver the item's prices in stores in real time

→ Over 10 million hits per day, with 95%+ of response time being less than 1 second

• Worked with UX designers to render the front-end for Social Migration of Non-Target registered accounts in the Cartwheel app to switch to Target Accounts

→ Experienced by 15 million users

• Spearheaded a software project that has allowed Target to expedite $100k+ of orders (and rising), as a full-stack engineer. Full software development cycle, end-to-end

• Stood up a new API that allowed the Target Mobile Apps to display locations of items to guests.

• Utilized C3.js and D3.js to visualize data in an elegant way for consumers of the Target's Big Data Platform (Hadoop) to monitor and see their usage on the cluster as a whole

Lockheed Martin Leadership Institute
Fall 2013 – Summer 2016

• Three-year certificate program that develops technical/innovative leadership, business acumen, people leadership and personal/ethical leadership

• Developed and practiced leadership skills through workshops, projects, and meetings with business executives from multiple Fortune 500 companies

Software Engineer – StudySync (McGraw-Hill Education)
Fall 2015 – Summer 2016

• Developed a system for users to log into a third-party API to access their library of books matching the courses offered by StudySync; used CoffeeScript along with Node.js, AngularJS

Education

Farmer School of Business
Completed: January 2021

Mini-MBA

Miami University
Graduated: June 2016

Bachelor of Science, Computer Science

- Theta Tau Engineering Fraternity: Petition Director, Marketing Chair
- Active Member of Association for Computing Machinery (ACM)
- UNICEF Campus Initiative: Help raised thousands of dollars annually
- Miami University High School Programming Contest: Judge

Activities

• **Mentoring** – Partnered with Genesys Works and mentored high school students in underserved communities through skills training, sharing experiences, and creating impactful relationships

• **Volunteering** – Enjoyed various volunteering activities with Habitat for Humanity, Feed My Starving Children, Engineers Without Borders, Great River Greening, etc.
